

Real Estate Website Project

A Modern Web Application for Property Listings

by Rudresh
Trivedi
Roll No:147

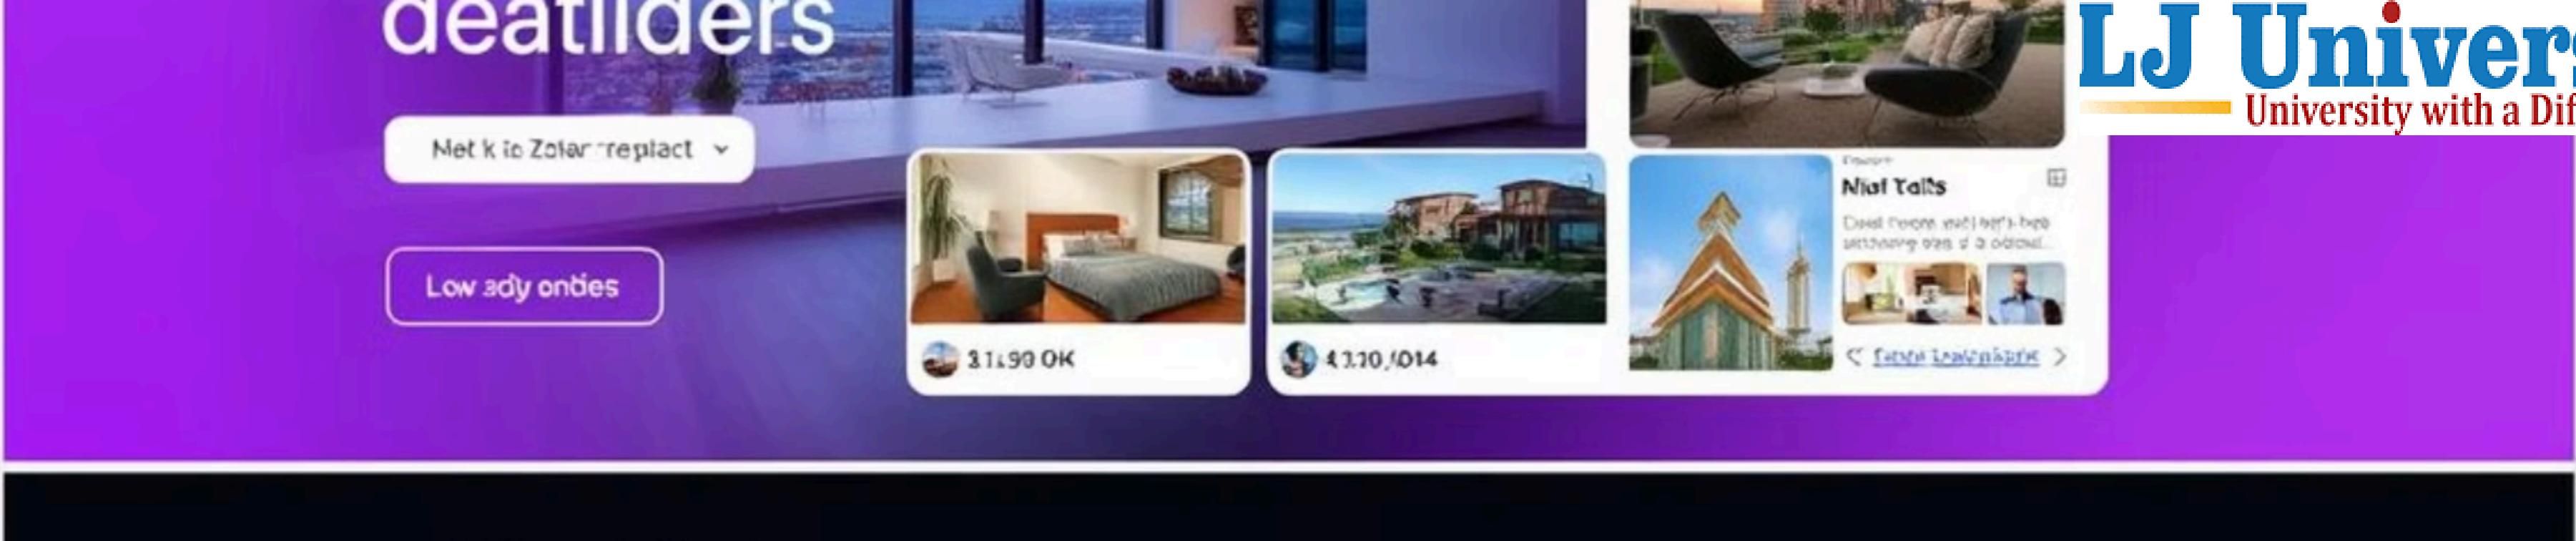

Project Overview

Purpose

Help users find their dream homes. Provide detailed property listings with images, descriptions, and ratings.

Technologies Used

- HTML, CSS, Bootstrap 5, JavaScript
- Google Fonts, Ionicons for icons

Key Features

Responsive Design

Works seamlessly on desktops, tablets, and mobile devices.

Customer Ratings & Reviews

Provides insights and trust for potential buyers.

Interactive Carousels

Showcase property images with smooth transitions.

Search Functionality

Advanced search filters for location, price, and property type.

Project Benefits

User-Friendly Interface

Clean and modern design. Easy navigation with a responsive layout.

Interactive Features

Carousels for property images. Hover effects and animations for better user engagement.

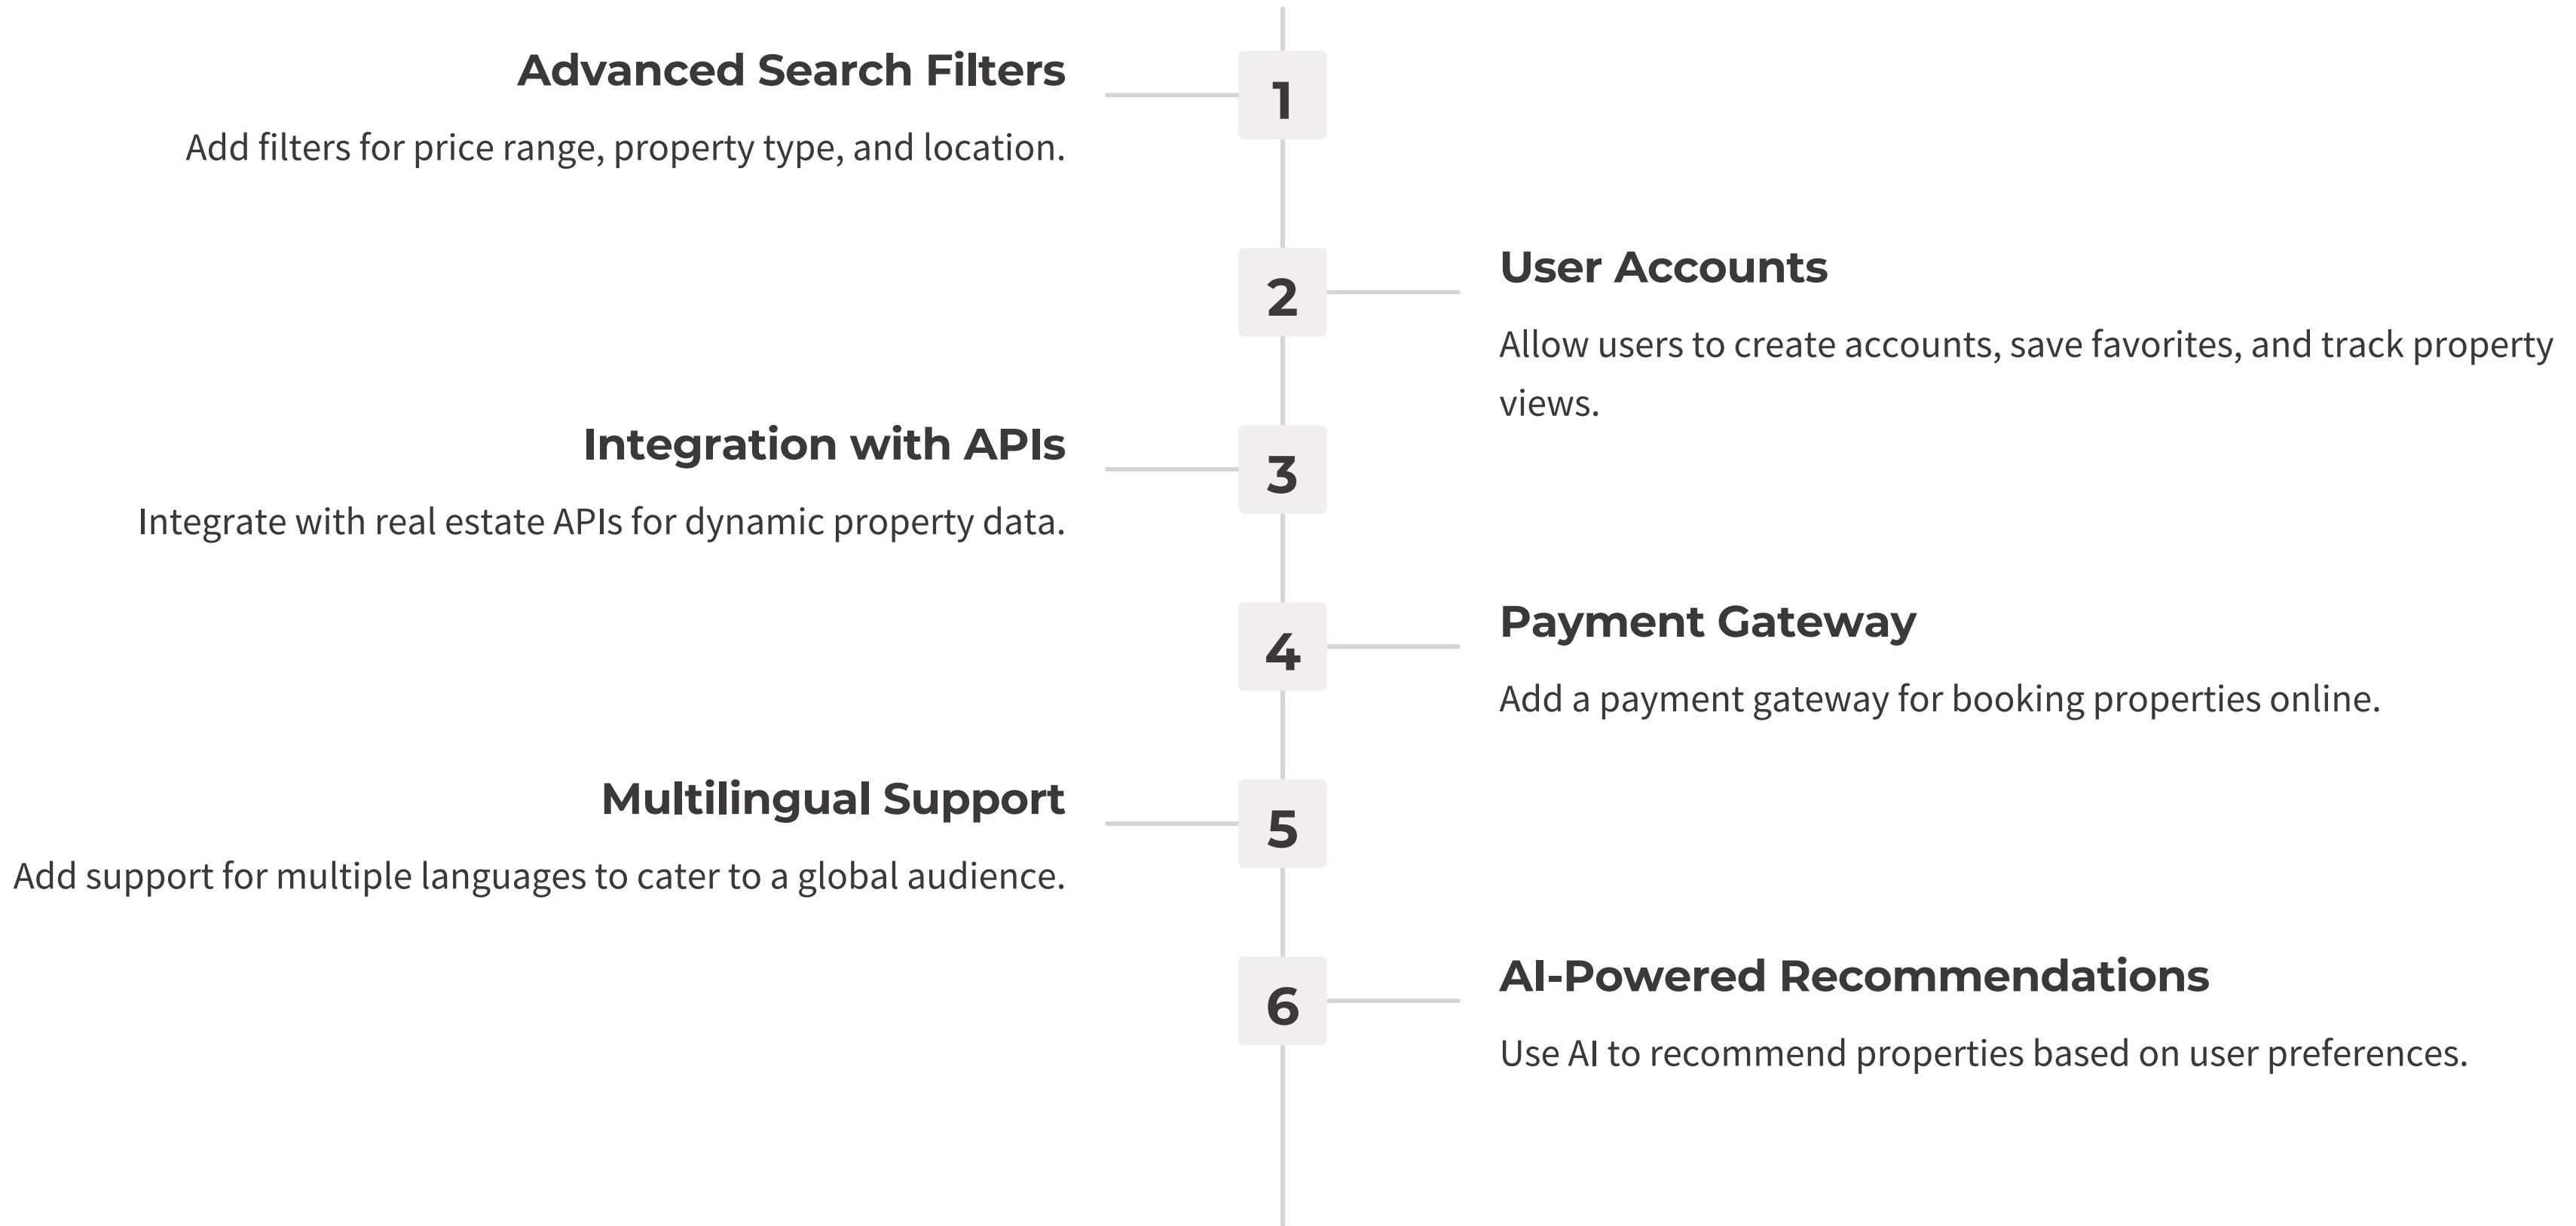

Scalability

Easy to add more properties, features, or pages.

Accessibility

Uses semantic HTML and ARIA attributes for better accessibility.

Future Enhancements

Conclusion

The Real Estate Website is a modern, user-friendly platform for property listings. It provides a seamless experience for users to find their dream homes.

Explore the website and provide feedback for further improvements.
